Replacing Existing Dentures or Partial

Replacing old dentures and partials are like buying new shoes. They will feel different and you may develop sore spots which need to be adjusted.

After all sores are adjusted and you no longer are getting sore spots, we need to make an appointment to equilibrate your bite.

Any problems need to be addressed – call our office for an appointment.

You will receive 6 months of adjustments free of charge.

Be sure to clean dentures on a daily basis with denture tablets and rinse your mouth daily with mouth wash to keep your mouth odor free and to kill bacteria.

You should also have a cancer exam done in our office once a year for your health.
